VISION FOR POST CARBON CITY OF ZAGREB

- The city that produces **zero waste** and pollution, every by-product is raw material or energy product for other activities. At the same time, the economy is largely localized, with a **neutral ecological footprint** or better.
- The city which is planned in an integrated way, intended with the aim of **activation public spaces**, with a decentralization of activities and development of polycentricism and all that through the **civil participation**.
- The city that is compact, planned in accordance with demographic predictions, which **recycles its spaces**, encourages multi-functional and **energy efficient construction** connected with a quality infrastructure which, among other, allows sustainable mobility.
- The city that keeps its natural environment and natural resources encourages the symbiosis of urban and rural areas inside the **preserved green zone**.
- The city that is a **leading healthy city** with happy and long lived citizens with available: healthy adequate water for drink highly standardized organic food, good air quality and waste management system.
- The city in which **long-life, free, critical, creative and holistic education** is available for everybody, produces **active citizens**.
